本地分支远程已合并 又继续repo upload 会被reject 怎么办

1. 使用git reflog 看本次提交的commit id

```
syrius@syriusdeMacBook-Pro-3 web % git reflog
0840a11 (HEAD -> fix_bug_3) HEAD@{0}: commit (amend): fix: bug .
0f85697 HEAD@{1}: pull --rebase (finish): returning to refs/heads/fix_bug_3
0f85697 HEAD@{2}: pull --rebase (pick): fix: bug .
9eb3bed (m/master, gerrit/master, fix_bug_2) HEAD@{3}: pull --rebase (start): checkout 9eb3bed967b5c97ca5fbc0b724403b7d01fbff96
280b253 (fix_bug) HEAD@{4}: merge 280b253: Fast-forward
9eb3bed (m/master, gerrit/master, fix_bug_2) HEAD@{5}: checkout: moving from fix_bug to fix_bug_3
280b253 (fix_bug) HEAD@{6}: checkout: moving from fix_bug_2 to fix_bug
9eb3bed (m/master, gerrit/master, fix_bug_2) HEAD@{7}: checkout: moving from fix_bug to fix_bug_2
280b253 (fix_bug) HEAD@{8}: merge gerrit/master: Merge made by the 'ort' strategy.
0c7fc90 HEAD@{9}: commit (amend): fix: bug .
4ebe5a5 HEAD@{10}: reset: moving to HEAD
```

   左边的是commit id 记住该commit id
2. 新起一个分支 repo start new_patch
3. 使用命令 git merge <commit id>   （commitid 是刚才记住的commit id)
4. 如果有冲突解决冲突
5. 使用命令git pull --rebase
6. git commit --amend 的时候删掉changeId
7. repo upload .
